1. ALLERGOLOGY.

Patients will be cared for in a query is performed where anamnesis and exploration.

2 DEPARTMENT OF PATHOLOGY.

The Department of Pathology of Hospital La Vega is composed of professional specialists dedicated to the analysis and research on the diseases with the aim of making diagnosis and optimal treatment for each patient.

3 ANESTHESIOLOGY AND RESUSCITATION.

Medical Specialty that consists of treating the patient during surgery, to keep it in optimum conditions during surgical procedures. Anesthesia can be general and correctional facilities, is also in the scope of this specialty, the treatment of pain.

It is imperative for your correct application consultation-anesthesia, to meet the patient and his clinical condition, and corresponding sign consents.

Another area of this specialty is to resuscitate postop, where the operated patient is stabilized and treaty until its transfer to plant in the best conditions of safety and comfort.

Our work is performed inside the surgical area and in other areas, such as x-rays, endoscopy, vascular arches, er, etc. ..

4 ANGIOLOGY AND VASCULAR SURGERY.

We are relating in cardiac surgery.

Formed by surgeons and nurses, angiologists and cardiovascular specialists.

5. DIGESTIVE SYSTEM.

Patients will be cared for by a specialized medical equipment with a long career in the digestive area. Gastrointestinal Endoscopy scheduled

Gastroscopy diagnosed
Diagnostic Colonoscopy
Biopsy of gastrointestinal tract
Endoscopic polypectomy
Endoscopic hemostasis Techniques
Jejunal Placement of probe for enteral nutrition
Stricture dilatation of digestive
Percutaneous endoscopic gastrostomy
Placement of prostheses in digestive system
Gastroscopy diagnostic therapeutic child
Colonoscopy diagnostic therapeutic child
Endoscopic retrograde cholangiopancreatography
Endoscopic retrograde cholangiopancreatography diagnosed
Endoscopic retrograde cholangiopancreatography therapeutic
Sphincterotomy bilio-pancreatic
Removal of gallstones
Placement of prostheses bilio-pancreatic
Bile Drains
Dilation of stenosis
Urgent gastrointestinal endoscopy (endoscopist with 24 hours guard localized)
Gastroscopy urgent Colonoscopy urgent removal of foreign bodies haemostatic endoscopic techniques

6. INTERVENTIONAL CARDIOLOGY.
We are pointers and experts in the field of interventional cardiology. Excellent and outstanding professionals are among our table doctor conducting population admitted diagnosed and coronary angioplasties.

7. CARDIOLOGY.
Pointers and we are experts in the area of Cardiology and cardiac surgery. Excellent and outstanding professionals are among our medical box.

- Echocardiographic
- Color Doppler
- Echocardiographic stress
- Dobutamine echocardiographic
- Echocardiographic transesofasica
- Ergometer or treadmill test
- Tension Holter
- Holter cardiac

8 CARDIAC SURGERY.
In Hospital La Vega we have an expert team doctor recognized prestige. His wide experience in all the techniques for the management and treatment of surgical pathology provides a complete support, quality and results of excellence.
9. GENERAL AND GASTROINTESTINAL SURGERY.

Prestigious specialists guarantee the good done in this area.

10. MAXILLOFACIAL SURGERY.

Your specialists of the face and neck offers you the possibility to consult and deal with the problems associated with the cervical region, facial and oral.

In it you will find a team of recognized professionals and specialists in the field. Oral surgery, including moral, maxillary cysts, bone grafts, lesions of the gum ...

Services General Traumatology

Orthopedic techniques.
Treatment sprains and fractures
Fixed Assets for treatment of various ailments in relation with the musculo-skeletal system.
Surgical techniques.
Treatment of infection, debridement of soft parts.
Excision of tumors of soft parts: lipomas, ganglion cysts, etc.
Short bones fracture treatment and long: osteosynthesis with pins, plates and screws, tiring, etc.
Elongation of members in economic asymmetries at and have achondroplasia.
Special

Trauma Patient with thoracic injuries, abdominal and cranial nerves (in collaboration with the Departments of Neurosurgery and General Surgery)
Spinal injuries.
Fractures associated with vascular lesions (in collaboration with the Vascular Surgery service).
Unit of knee surgery.

Traumatic affections of the knee:
Orthopaedic and surgical treatment of fractures of the distal epiphysis of the femur, the ball joint and the proximal epiphysis of the tibia.
Arthroscopic treatment of the meniscal lesions with the different techniques of meniscectomia partial and total and suturing of the peripheral lesions.
Reconstruction of the injury to the anterior cruciate ligament and the posterior cruciate ligament with technical semi-invasive assisted by arthroscopy, with techniques H-T-H or 4T.
Application of combined techniques in the treatment of complex ligamentous injuries. (Corrective osteotomies and plastia ligamentous in a while).
Treatment of injuries to the patella tendon.
Orthopaedic conditions of the knee:
Orthopaedic and surgical treatment of diseases of the extensor apparatus, with implementation of the different techniques of realignment and osteotomy plane-oblique.
Surgical treatment of gonarthritis by desaxacion in varus or valgus with implementation of the various techniques of tibial or femoral osteotomy, subtraction or addiction.
Arthroscopic treatment of the various inflammatory conditions or pseudotumoral of the synovial membrane or of the articular cartilage.
Mosaicoplastias.
Infiltration of Hyaluronic Acid and growth factors Platelet.
Unit of surgery of the hip and pelvis.

Child Pathology of the hip:
In collaboration with the Pediatric Service, is carried out the diagnosis and treatment. The most frequent affections are:
Dysplasia and congenital dislocation of the hip.
Septic arthritis.
Transient synovitis.
Perthes' disease.
Upper femoral Epifisiolisis.
Obstetric Trauma
In collaboration with the rehabilitation service, coordinates the treatment of neuromuscular disease that primarily affects in the hip:
Spastic Paralysis (PCI).
Previous polio.
Pathology of the hip in the adult:
Aseptic necrosis of the femoral head. Is the surgical treatment for the different stages of evolution: decompression with perforations, osteotomy inter-trochanteric fracture, replacement arthroplasty.
Hip Arthroscopy diagnosed and for the treatment of injuries of "shock acetabular".
Arthroscopic treatment of the hip "spring".
Arthropathies degenerative (osteoarthritis), secondary to dysplasia: different types of osteotomy in function of the degree of deformity femoral (inter-trochanteric fracture) or pelvic (osteotomy of Chiari).
Alterations of the mechanical shaft: the lower extremity, combining different types of femoral osteotomy (subtrocanterea, supracondilea).
Traumatic pathology: orthopaedic and surgical treatment of the acetabular fractures (tractions, osteosynthesis) as well as femoral with the various techniques depending on the age of the patient (osteosynthesis, intramedullary fixation, partial prosthesis and total).
Hip Artrodiastasis in aftermath of degenerative pathology of adolescent.
Urgent pathology:
Treatment of fractures of the proximal end of femur (nails, partial or total prosthesis, osteosynthesis)
Osteosynthesis of complex fractures of cotilo.
Treatment of pelvic fractures: osteosynthesis, external fixation.
Repair of the dislocations sacroiliac techniques through open or minimally invasive.
Prosthetic surgery unit

Primary Surgery:
Hip: total hip prosthesis adapted to age, bone structure and deformity of the hip: surface, cemented, not cemented of several types: press-fit, porous-coated, etc.
Knee:
Total knee prosthesis using the same guidelines: cemented, not cemented, constrained or not with stabilization and later.
Prosthesis Implantation unicompartmental knee with minimally invasive techniques
Upper Limb:
Prosthetic Surgery in the treatment of severe fractures, osteoarthritis glenohumeral, Reiters due to injury of the cover, necrosis cephalic, pseudoarthrosis, consolidations depraved and rheumatoid arthritis
Hemiartroplastias (in shoulder and elbow).
Inverted shoulder prosthesis.
Total elbow prosthesis.
Radial head prosthesis.
Osteosynthesis to replacement prosthesis
Prosthetic ankle surgery.
Other prosthetic surgery (we can see that as you get ... )
Revision Surgery:
Replacement of total hip prosthesis loosened with new implants adapted to the bone loss due to loosening, using approach routes expanded and, if required, with autologous bone graft or heterologous.
Partial prostheses Replacement and total knee, that are often serious deformities by bone loss and ligamentous instability, using implants of modular type, with the possibility of using intramedullary stems, cots and designs- either constrained.
Replacement of the septic loosening of hip and knee replacements in a time or two times, with or without temporary spacers.
Pathology Unit of the hand

Scheduled Surgery:
Surgery degenerative diseases:
Fasciectomy total and subtotal of Dupuytren's disease.
Rizarthrosis: bone resections, tendinous plasty, arthrodesis and arthroplasty.
Resections Hosea.
CATALOG OF SERVICES

Carpometacarpal Arthrodesis, MTCF e IF.
Prostheses MTCF e IF.
Arthrodesis and prosthetic wrist (total).
Denervaciones.
Surgery of the knee distal radio-ulnar:
Arthroplasty type Sauve-Kapandji, Darrach.
Ligametoplastias.
Osteotomy of elongation-shortening of the ulna.
Surgery of the hand and wrist rheumatic.
Arthroscopic Surgery of the wrist.
Surgery for the disease of Kiemböck:
Revascularization of the semilunar.
Partial fusion, osteoplastias.
Osteotomy of the radius and ulna. The semilunar prostheses.
Tumor surgery (in collaboration with the Unit of tumors):
Soft tissue tumors
Bone Tumors
SINEWY Surgery:
Stenosing tenosynovitis. Fingers in spring.
Spastic Hand
Tenolisis.
Tendon grafts.
Tendon transfers.
Reconstruction of pulleys.
Boutonniere deformity correction type and swan-neck.
Surgery of the nervous disorders:
Entrapment syndromes: carpal tunnel, Guyon, radial.
Tendon transfers in case of paralysis of the n. radial, n. medium, ulnar, or complex.
Neurolysis and neurorrafias microquirugicas by injuries.
Plastic Surgery:
Grafts.
Simple and vascularized flaps.
Hand Surgery pediatric:
Soft parts.
Hosea.
Mixed.
Traumatic Surgery delayed and the traumatic aftermath.
Osteosynthesis.
Corrective osteotomies.
MCF Capsulectomias by rigidity and IP
Digital transplants.
Urgent surgery:
Bone surgery: the treatment of fractures of the bones of the hand and wrist reductions through open and stable osteosynthesis (miniplates) or with surgery or percutaneous with external fixation
Tendon Surgery.
Repair of injuries to tendons extenders
Repairing the damage of flexor tendons
Microsurgery of the peripheral nerve injuries.
Cutaneous Surgery (repair scars).
Microsurgical Reconstruction:
Unit of foot surgery

Scheduled surgery with income:
Bone surgery of the tarsus and ankle:
Osteotomy.
Resections Hosea.
Partial or total arthrodesis: warm-talar, triple arthrodesis, etc.
Grafts are released into.
Mosaicoplastias.
Surgery of the congenital and acquired deformities:
Metatarsus adducto.
Clubfeet, hypotonia.
Pes cavus.
Astragalus vertical.
Coalitions of the tarsus.
Accessory navicular bone.
"Hallux valgus" youth and adult.
Bunion of "tailor".
Metatarsalgias, according to Weill.
CATALOG OF SERVICES

Neurological deformities:
Spastic (PCI).
Myelomeningocele.
Sequelae of traumatic Surgery.
Neurological Surgery of the foot-metabolic.

Plastic Surgery:
Skin grafts.
Simple flaps of skin and subcutaneous cellular.

Scheduled Surgery without income:
Ankle Surgery:
Arthroscopic surgery.
Perforations.
Partial Sinoviectomias.
Surgery of the tarsus:
Nerve compression.
Retractions of plantar aponeurosis.
Bursitis, tendinitis, Haglund ...
Treatment calcaneal spur, metatarsalgias osteotomies (simple)
LEDdernose Treatment
Surgery of the middle tarsus:
Arthrodesis tarso-metatarsal.
Osteotomy tarso-metatarsal.

Forefoot Surgery:
Metatarsal osteotomies.
Resection arthroplasty.
Arthrodesis.
Soft tissue Surgery capsule-articular.
Releases and nerve resection. Treatment of Morton's neuroma.
Surgery of cysts, lipomas, and granulomas.
Surgery of the nails.

Foot Surgery traumatic urgent:
Bone:
Treatment of fractures: osteosynthesis
Articular reconstructions.
Arthrodesis
Injuries to tendons and nerves. Reconstructions.

Tears of the Achilles tendon: techniques open and mini-open.

Soft tissue lesions and skin.

Unit of tumors

Study and treatment of bone tumors, benign or malignant, primary or metastatic:

Primary malignant bone tumors: early diagnosis and treatment of the tumor surgical oncology-final (in collaboration with Oncology).

Primary bone tumors Benign: diagnosis and surgical treatment of all bone lesions of tumoral origin and pseudo-tumor.

Soft tissue tumors: diagnosis and treatment of all the tumor lesions of the soft tissues that have a relationship with the musculo-skeletal system.

Bone metastases: diagnosis and surgical treatment and prophylactic definitive of all metastatic bone lesions.

Unit of surgery of the shoulder and elbow

Traumatic affections. Orthopaedic and surgical treatment of fractures and injuries of the shoulder girdle and elbow. Osteosynthesis normal and small fragments.

Operative arthroscopic techniques:

In collaboration with the rehabilitation service, implementation of treatment protocols combined operative arthroscopic techniques and healing of the lesions of the cover from the rotors.

Arthrolysis shoulder joints and the elbow.

Treatment of the instability of the shoulder, glenohumerales and acromioclavicular.

Treatment of recurrent dislocation.

Treatment of the nerve compression syndromes:

Release of the N. Ulnar with or without transposition

Release of the N. Radial in the arcade of Fröshe.

Orthopaedic and surgical treatment of the epicondylitis and epitrocleitis.

Hospitalization

Patients admitted to the charge of the service, do so under the different existing Nursing Units in the Hospital (2nd, 3rd and 4th floor), where are reviewed at least once a day, checking their evolution and lesional state.

Operating Room

It is located on the 1st floor of the hospital, usually being assigned the number 2 at the service of trauma care, available in the table of a convertible to orthopedic table. At the same, depending on needs, incorporating the elements necessary to complete the different
treatments (surgical microscope, Towers of arthroscopy, consoles of engines, fuel injection pumps-aspiration for arthroscopy, image intensifier, etc.).

Emergency Department of Traumatology
They are located in the same space for General Emergencies, even though they have for our own staff, trained to discern the level of urgency, warning, when necessary, the traumatologist located (24 hours) and conducting the treatments for which they are not needed the expertise.

12. PEDIATRIC SURGERY.
The Pediatric Surgery Service of Hospital La Vega is dedicated to the surgical care of children.

13. PATHOLOGICAL ANATOMY.
The Department of Pathology of Hospital La Vega is composed of professional specialists dedicated to the analysis and research on the diseases with the aim of making diagnosis and optimal treatment for each patient.

14 PLASTIC SURGERY, AESTHETIC AND RESTORATIVE.
Prestigious specialists guarantee the good done in this area.

15. THORACIC SURGERY.
Thoracic Surgeon benchmark in this type of surgery.

16 PALLIATIVE CARE.
Hospital La Vega offers a service of relief care to patients with serious diseases.

17. DERMATOLOGY.
Specialists with extensive experience in the dermatological patients.

18. ELECTROPHYSIOLOGY.
It is a group formed by cardiologists professionals, who have extensive experience in cardiac pacing and in the treatment of cardiac arrhythmias. The objective of CardioRitmo lift is to provide a comprehensive solution in stimulation and cardiac arrhythmias in patients of the provinces of Alicante and Murcia.

Our group offers a wide range of procedures that covers both diagnosis and treatment through techniques of radiofrequency ablation of the majority of cardiac arrhythmias, as well as various
procedures of cardiac stimulation from the implant and follow-up of a pacemaker, until the device of a cardiac resynchronization.

Electrophysiological studies diagnostics: for the diagnosis of any type of cardiac arrhythmia

Pharmacological Test: for the unmasking of rhythm disorders, not present on a conventional ECG.

Tilt table test or basvulante: for the comprehensive study of the syncope.

Electrophysiological studies therapeutic Ablation procedures:

Reentrant Tachycardias settled: atrioventricular nodal reentrant, posteroseptal
Syndrome of Wolf-Parkinson -White
Atrial Flutter typical and atypical
Ablation of the atrioventricular conduction
Automatic atrial tachycardias
Ventricular tachycardia in ischemic cardiopathy
Idiopathic ventricular tachycardia
Atrial Fibrillation
Implant and tracking devices:

Pacer
Defibrillators (ICDS)
Holter insertable
Cardiac Resynchronization Devices (pacemakers or defibrillators )

19. ENDOCRINOLOGY.

In Hospital La Vega we have specialists with extensive experience dealing with the endocrinological abnormalities

20. PHARMACY.

Hospital de la Vega has a hospital pharmacy 24 hours and also offers a service for outpatients with chronic diseases such as multiple sclerosis, HIV, etc. that removed medication of diagnostic use hospital without being admitted.
In the Pharmacy of Hospital La Vega, recently relocated and expanded in the basement of the main building and with direct access to the street, we prepare the quimientos of cancer patients. We have a "White Room" that has all the necessary requirements for the preparations in campaign of laminar flow in a passenger compartment with ideal conditions of temperature, humidity, pressure and sterility.

In addition we manage the entire health-expendable material.

21. GYNECOLOGY AND OBSTETRICS

With an extensive and experienced team of professionals, technical equipment for the diagnosis and treatment that we possess allows us to face the study and treatment of any obstetric problem - gynecological.

22. HAEMATOLOGY AND BLOOD BANK.

Hospital La Vega account with a reservoir of its own blood, which guarantees the correct analysis and administration of blood products. Has recently been expanded and relocated in the first basement of the center. Oncological Treatments

Intravenous treatments for other types of diseases for hospital use

23. DAY HOSPITAL.

Hospital La Vega offers a care service by which the patient receives the therapeutic techniques and intravenous medication that requires your illness without need to go into a plant of hospitalization on an outpatient basis returning to his home after the treatment.

The Unit covers the Medical Oncology Service at Hospital de la Vega where cancer patients who need intravenous chemotherapy can receive your personalized treatment. Recently relocated to the right wing on the ground floor of the center (former location of emergencies).

Oncological Treatments

Intravenous treatments for other types of diseases for hospital use

24. LABORATORY

Our laboratory includes sections on Biochemistry, Hematology and Microbiology. In addition we work with the external laboratories International it only exacerbates them, where are all those unusual tests. We have available to the clinic on Emergency Laboratory 24 hours.

All the information about the group analyzes in our web www.analizalab.com obstetrics and gynecology: Evidence of pregnancy, prenatal screening, genetic diagnosis of malformations, prevention neoplasms.

Pediatrics: Altered growth, digestive disorders, allergies and intolerances.

General Medicine: All kinds of analysis for periodic revisions, control diabetes, blood clotting tests (Sintrom), rheumatology, allergy and tumor markers.
PREVENTIVE MEDICINE: Screening of colon cancer and prostate, STDS, genetic study of hereditary neoplasms and serologies.

Surgery and Traumatology: Preoperative, with results available in the day.

25 AESTHETIC MEDICINE.
The aesthetic medical center bet with firmness to offer the latest advances in the treatment of the beauty, the welfare and anti-aging.

With the proven quality of the services of La Vega, users will enjoy a very competitive prices and the most avant-garde technologies in aesthetic treatments.

The wide range of surgical treatments are carried out by our specialists in Plastic Surgery. It also offers treatments of fatty tissue with ultracavitacion, Body Sculptor, radio frequency, Endermologie (LPG), mesotherapy, electroporation etc, as well as the account center with laser equipment of Candela alexandrite platform and the Multiflex Ellipse IPL2 for therapies of epilation with light, and derived from pigmentary alterations and vascular as facial rejuvenation, poiquilodermia of civatte, rosacea, angiomas, telagiectasias, lentigines, eferides and others.

The portfolio of services is completed with other minimally invasive methods such as facial fillers, peels, botulinum toxin, mesotherapy with ac. Hyaluronic acid, vitamins, etc...

26. FAMILY AND COMMUNITY MEDICINE.
Is the area of medicine in which there is the closest contact and frequent between patient and doctor.

27. GENERAL MEDICINE.
Is the area of medicine in which there is the closest contact and frequent between patient and doctor.
